

Call for Student Research Proposals 2019

DEADLINE: Friday March 29, 2019 5:00 PM

The Virginia Water Resources Research Center (VWRRC) is providing competitive funding for student research in water resources for the period June 1, 2019 to May 29, 2020. Proposals are invited in all areas of water resources-related research including science, policy, management, and engineering. The maximum funding amount is \$5,000 for *one* year; up to three proposals may be awarded depending availability of funds. Applicants must be enrolled as a full-time undergraduate or graduate student at a Virginia institution of higher education and be the primary participant in the research. Faculty and staff are encouraged to contribute as Co-Principal Investigators, but *the proposal and application materials should be written and completed by the student*. At least one faculty member acting as the main research supervisor must be included as a Co-PI.

Example research areas include but are not limited to:

- Watershed planning, management, and policy
- Impacts of land use and climate change on water resources; extreme events, floods, in-stream flows
- Source water protection; groundwater withdrawal, demand, allocation in coastal aquifers
- Stormwater management and water infrastructure
- Private & small-scale water infrastructure (wells, sewerage) in rural areas
- Watershed community engagement
- Intersection of water & energy
- Ecological impacts or ecosystem services
- Occurrence, fate, and transport of pollutants including sediment, nutrients, organics, metals and plastics

Evaluation Criteria and Selection Process

Proposals will be evaluated with emphasis on intellectual merit, innovation, likelihood of success, *broader impacts on Virginians*, and alignment with state or regional water resources challenges. Financial need is not a criterion in the selection process. The following criteria will be considered:

- How important is the proposed activity to advancing knowledge and understanding within its own field or across different fields?
- To what extent does the proposed activity suggest and explore creative and original concepts and innovative, promising approaches to solving water-related problems?
- How clear are the objectives of the proposed work? If part of a larger project, which objectives will be supported by this grant?
- How well qualified is the proposer (and Co-PIs) to conduct the project? Is there evidence to support that the PIs have experience with the subject matter?
- How well conceived and organized is the proposed activity? Is there sufficient access to resources? Is the research leveraging existing resources?

- If part of an ongoing or larger project, what is the value added through support from this grant? In other words, would funding from this grant increase the student's success on the project? How important is the proposed work to the student's overall thesis or dissertation project?
- *Does the proposed activity address water resources problems of major importance to Virginia or the region?*

Eligibility

- Students are eligible at any point in their graduate program and undergraduate students are eligible if they enroll in independent study credit with a faculty member and are at least junior level standing. Students must be full-time status during the grant period. The student's main faculty research supervisor in his or her recommendation letter should address student eligibility and if the applicant is an undergraduate, the research supervisor should describe how the independent study credit(s) will be accomplished.
- Appropriate topics may be in water resources science and engineering (including its physical, chemical, or biological aspects) or in water resources policy, planning, and management (including economics, systems analysis, sociology, and law).
- The faculty member acting as the main research supervisor must be included as a Co-PI. Other Co-PIs may be included as well.
- Only one application is allowed per student *and the student must write the proposal.*

Guidelines

All proposals should be written using 12-point Times New Roman font with 1-inch margins and standard page dimensions (8.5" by 11").

Cover page: The cover page should be *no more than one single-spaced typed page* and should include (a) project title; (b) name of the student PI and faculty Co-PI(s) including university and department/school, mailing address, phone number, and email address; (c) total budget request; (d) five keywords describing research; and (e) an abstract. If there is more than one Co-PI, indicate which is the student's main research supervisor.

Statement of Purpose: The statement should be *not more than one single-spaced typed page (including figures)*. This section should be used to explain to the selection committee why receipt of this grant is important to the student's research and the field of water resources. The significance and relevance of the proposed project should be explained and it should also highlight the significance in terms of important water resource issues in Virginia or the region. It should address why receipt of this grant is important to the student's program, thesis, or dissertation and how it may allow the student to carry out work beyond that which was originally planned or how it will enhance/expand/achieve goals of the student's training. Any additional information to support the student's application should be included in this section.

Research Proposal: This section is limited to *two single-spaced typed pages (including figures)* that address 1) what is to be accomplished in the proposed project (including goals, objectives, hypotheses, or research questions), 2) how the proposed work will be carried out and 3) what results are expected (i.e., scientific, policy or technical contributions). This section should include specific aspects of experimental design, analysis, and methodologies as appropriate and suitable background that provides context and justification to the proposed work. Details should be adequate to evaluate probability of project completion/success (a timeline is suggested). The

proposal should be written so that a general professional in water resources (i.e., not necessarily a specialist) can assess its laudability and merit. If relevant, research progress to date should be stated. References cited are not included in the page count.

Detailed Budget: Provide a detailed listing of each budget item, its estimated cost, and justification. Acceptable budget items might include, but are not limited to: student summer salary; research costs such as laboratory supplies, computer simulation time, analytical costs, or field instrumentation; travel costs to field sites and/or one technical symposium or conference if the applicant is accepted for a poster or presentation.

CV and Transcripts: The student should provide a copy of his or her current CV (2-page maximum). Transcripts are not required and should not be submitted.

Letters of Recommendation: The student's main faculty research supervisor (or in the case of undergraduate applicants, the research advisor or department head) and another faculty member (e.g., from the student's thesis committee or in the case of undergraduate applicants a faculty member that can speak to the student's research aptitude) must each submit a letter of recommendation in support of the proposal. *Student eligibility, academic performance, and qualifications to carry out the research* should be addressed in the letter by the student's main faculty research supervisor and the other letter writer. Specific examples demonstrating the student's ability will provide a stronger endorsement. Letters must be received within 5 days of the application deadline through the web recommendation letter submission page (see URL below). It is the student's responsibility to arrange for recommendation letters, check on their status with letter writers (not with the VWRRC), and to communicate instructions to letter writers. An automatic email will be sent to letter writers when a student submits a proposal. This automated email is intended as a reminder to submit a recommendation letter. Also, once a recommendation letter is submitted, an automatic email will be sent to the letter writer and the student as confirmation that the letters were received by the VWRRC.

- Letters should be typed on official letterhead, signed by the faculty member, saved in PDF format, and uploaded using the web recommendation letter submission page: <http://tinyurl.com/VWRRC-grant-recommend>.

Other details and submission: The budget may not include indirect costs and must not exceed \$5,000. The funding will be awarded as a grant to the student's faculty advisor. *Proposals submitted from institutions outside of Virginia Tech will only be accepted from the student's university office of sponsored programs or grants and contracts office and not directly from individual students or departments.* Project duration will be for a maximum of one year beginning on June 1 (or potentially at the start of the new fiscal year – July 1). Cost sharing is not required. Incomplete applications and those that do not conform to the above format will not be considered and applicants will not be notified as such. Proposals and letters should be submitted online by the deadline listed on this RFP. **Under no exceptions will late applications or recommendations be accepted.** The proposal packet with the exception of recommendation letters should be submitted using the web interface available at: <http://tinyurl.com/VWRRC-grant>.

Deliverables

Required deliverables for projects funded under this program include, but are not limited to, an annual report formatted for communicating to the general public (due during the summer after the award period; details and a specific due date will be provided in the award letter), copies of publications and follow-on proposals generated from the project, and VWRRC support must be acknowledged in all publications and presentations. ***It is the responsibility of the faculty Co-PI to communicate publications and proposals resulting from this grant even after the reporting period. Continued funding of this program is contingent on the VWRRC reporting to its funding programs.***
